# With atmosfair for a better climate

Papp Logistics Gruppe is working together with the non-profit organization atmosfair to combat climate-damaging greenhouse gas. 56,520kg of CO<sub>2</sub> were compensated last year thanks to climate protection contributions.

Climate protection is part of the corporate culture at Papp Logistics. For the year 2022, the contribution made compensates the CO<sub>2</sub> emissions of company vehicles and company trips. All of the company's locations have already been climate-neutral since 2014. The goal is to be 100% climate neutral by 2030.

atmosfair finances the development and expansion of renewable energies in developing countries. Thanks to Papp Logistics' contribution, cooking systems and biogas plants can be built and electricity generation secured. All projects supported by atmosfair are based on the Paris climate protection agreement.
