Papp Logistics involved in climate protection

Business responsibility, climate protection at regional and international level and economic success are not a contradiction for Papp Logistics.

As well as avoiding and reducing greenhouse gas emissions, e.g. by purchasing green electricity in Germany, the company also focuses on targeted emissions compensation.

Through the partnership with Aktion Zukunft+, a total of 645 tonnes of CO₂eq. emissions from business trips in 2024 were compensated. Aktion Zukunft+ is a project run by the districts of Munich and Ebersberg in cooperation with Energieagentur Ebersberg-München GmbH and promotes both regional and global climate protection: in Germany, Papp Logistics supports forest conversion in Forstenrieder Park and humus cultivation, while internationally it supports the expansion of PV systems in India.

In this way, Papp Logistics is not only working within its own organisation, but also outside the box to contribute to a future worth living and to counteract climate change.
